1 Introduction

TransAbacus is a Windows desktop application that counts the amount of words in an entire web site. To do so, TransAbacus crawls a given url, showing the number of words on the body, title, keywords, description and alt. text in each web page of the site. It also crawls the files linked with the url (pdf, txt and rtf files are supported by the current version of TransAbacus).

TransAbacus was designed by translators for translators, to help them to estimate and budget quickly and easily a website translation or localization project.

Restrictions

The current TransAbacus version has the following restrictions:

- It does not count flash components in web pages
- It does not support java menus.

Tip: In case the web site you need to count has java menus, we suggest finding the URL of the web page sitemap and use this URL for TransAbacus.

- It does not support password protected pages

Tip: Most password protected sites use cookies. If you need to count a website with password protected pages, we suggest you to open the password protected page in your browser (entering the username and password) and keep it opened while TransAbacus counts the words of the entire site. TransAbacus will use the cookie created by your browser.

Installation

1.1 *TransAbacus requirements*

To install TransAbacus on your PC, you need the following requirements:

- Windows 98, Windows 2000 SP 4, Windows XP SP 2, Windows Millenium, Windows 2003 Server, Windows Vista
- .NET Framework 2.0 installed (if you don't have this, you can download it from our web page)
- 100 MB RAM
- 20 Mb free hard disk space

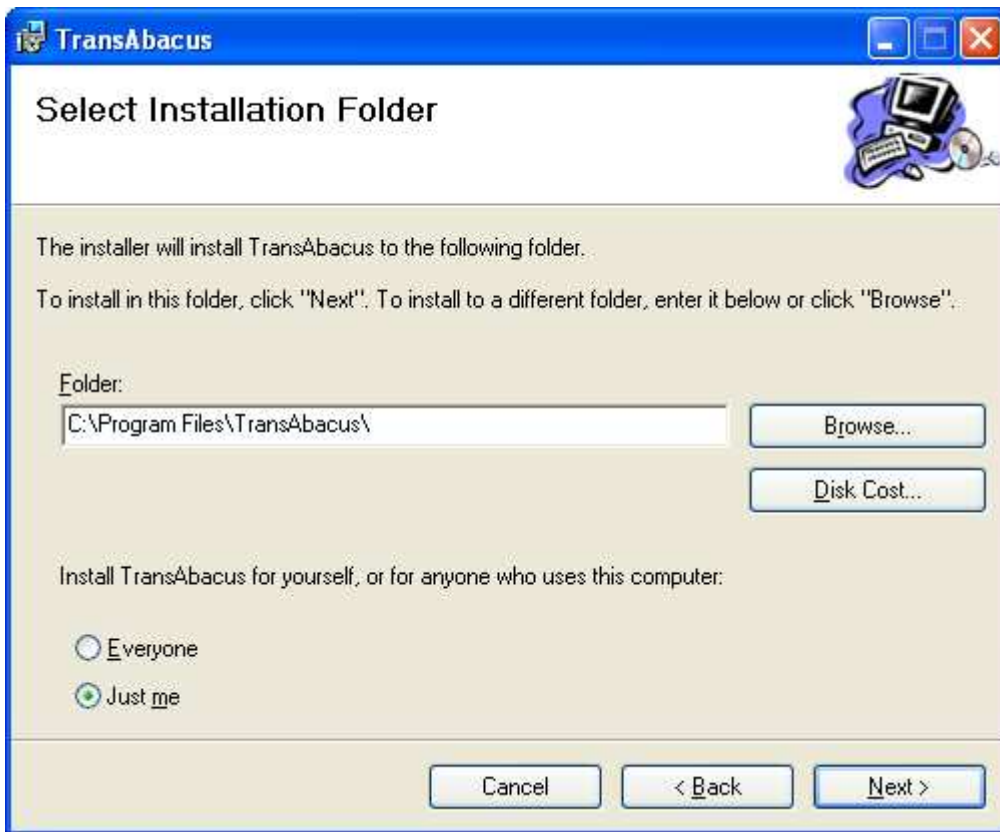

1.2 *Installing TransAbacus*

To install TransAbacus follow these steps:

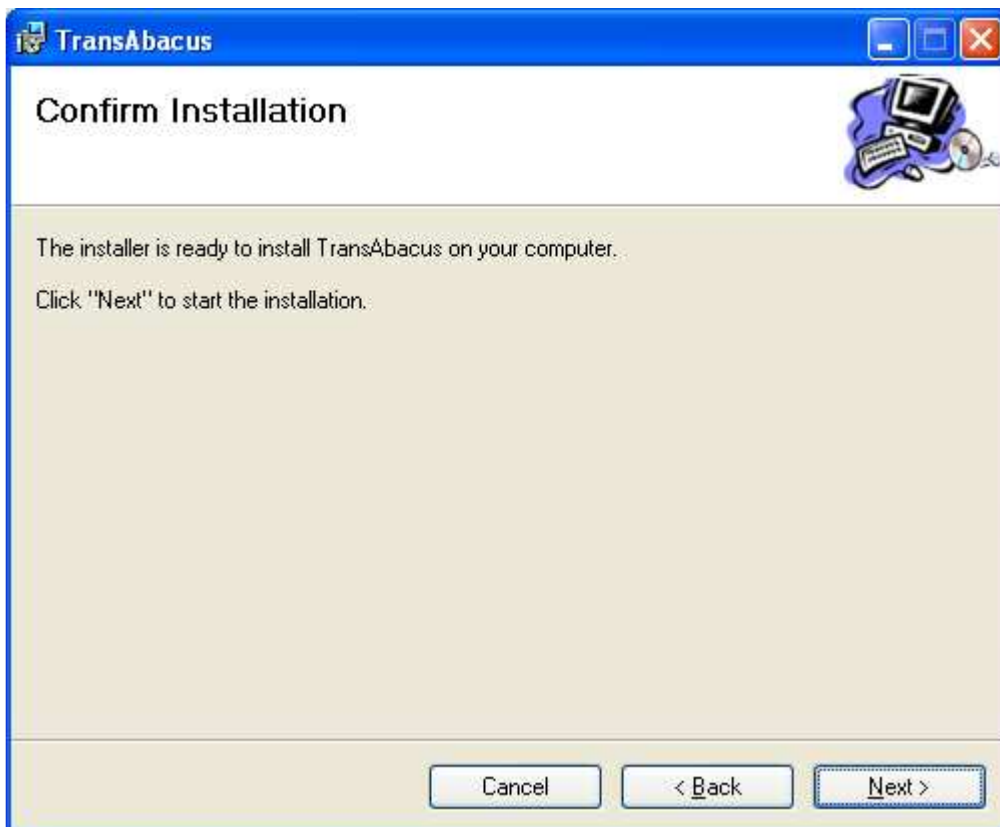

Step 1: Run TransAbacus_2.0.2 Setup.msi installer. The following welcome window will be shown:

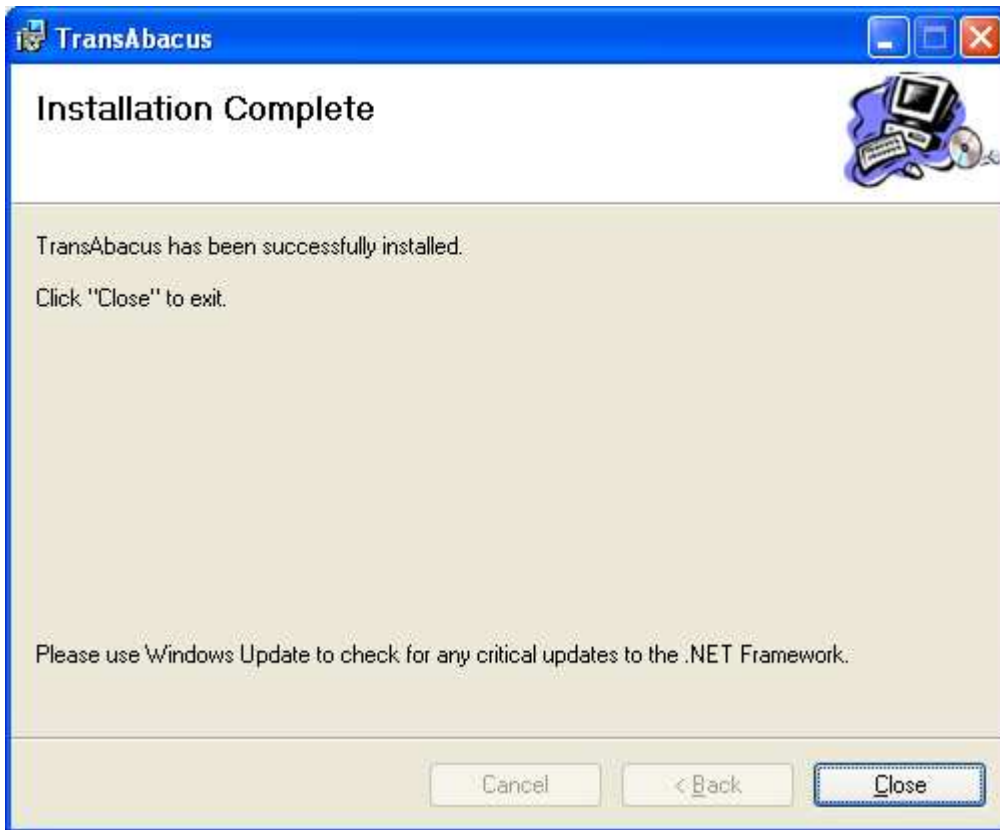

Step 2: Press Next. A You will be able to change the installation folder, although we recommend you to use the default one.

Step 3: Press Next again. A confirmation window will be shown.

Step 4: Press Next to let the installation begin. If the installation completed successfully you will see the following window:

 **Note:** When installed, TransAbacus will set up an icon on your desktop and a menu entry in the Window's Start menu.

2 Registering TransAbacus

When you install TransAbacus on your PC, the software is installed by default in trial mode. The trial version of TransAbacus has the same functionalities than the full version, except that is limited to display just the 5 first pages/files for the website being counted. You can remove this limitation by buying a registration code at TransAbacus web page (<http://www.TransAbacus.com>).

When you buy a registration code, you will receive an email with such code (a 25-digit number). To register TransAbacus you have to do the following steps:

	Note: You must be connected to the Internet to register TransAbacus
---	--

Step 1: Go to Help -> Register

Step 2: Enter the 25-digit registration code received by e-mail and press OK:

Upon successful registration you will get the following message:

If you get an error message, please check that

- 1) You are connected to Internet
- 2) You correctly enter the registration code received by email when you buy TransAbacus
- 3) You haven't used the registration code before

If you still have problems registering TransAbacus, send an email to support@transabacus.com

Note: If you have registered TransAbacus, you can view the registration code used by clicking Help -> About.

2.1 Unregistering TransAbacus

TransAbacus' registration code is valid for one PC only. If you want to move your registration code from one PC to another, you must first unregister TransAbacus from the first PC, so you can use it on the second PC.

Note: You must be connected to the Internet to unregister TransAbacus

To unregister TransAbacus, go to Help -> Unregister.

Upon successful unregistration you will get the following message:

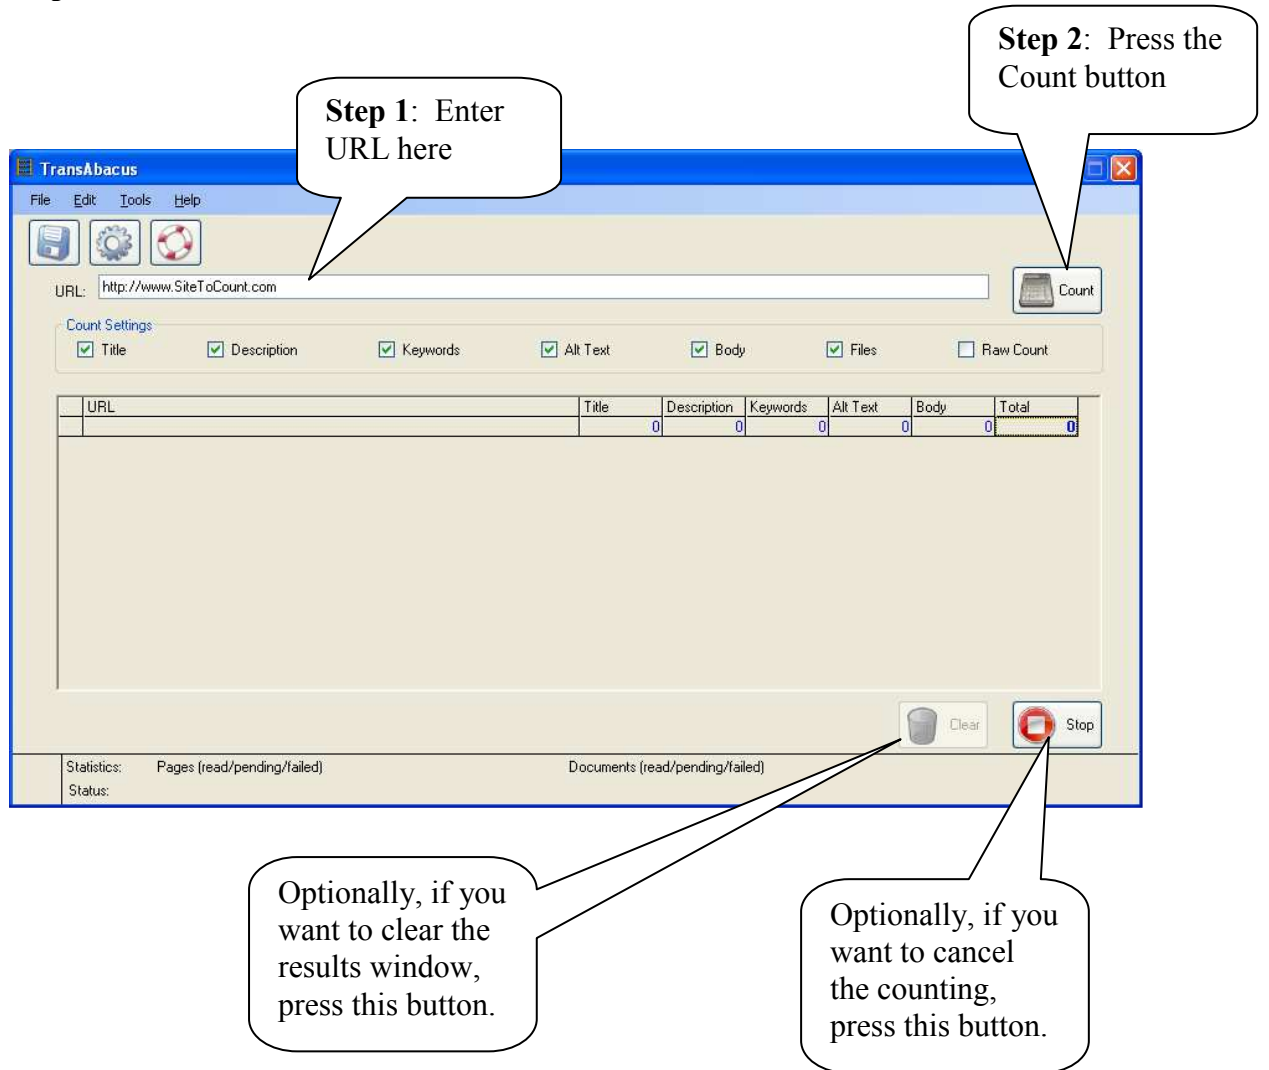

Note: When you unregister TransAbacus, it will behave as a Trial version until you register it again (using the same registration code or using another one)

3 Quick start guide

To use TransAbacus is as simple as follow 2 steps:

Step 1: Enter the URL of the website you want to count in the URL textbox

Step 2: Press the Count button.

4 Counting options

TransAbacus lets you count the following items for a web page:

- **Title:** The title tag is what you see at the top of your Internet Explorer browser for each web page you visit.
- **Description:** The description tag is a text that describes the site. It's mainly used by search engines (sometimes, search engines display it in the results of a search query under the title).
- **Keywords:** The keywords tag is a list of terms that defines what keywords apply to your webpage. As the description tag, this is used by search engines.
- **Alt text:** Alt text (Alternative text) is the text a user can see when he/she hovers over a image in a web page. Search engines also use alt text to help return appropriate images as a result of a query.
- **Body:** The body is the text the user reads on a web page.

 **Note:** Title, Description, Keywords and Alt text are extremely important for search engines, therefore they must be translated when you localize a web page (and so, they have to be counted for budget purposes).

- **Files:** This option allows you to count the amount of words for linked files. The current version supports .pdf, .txt and .rtf file formats.
- **Raw Count:** If this option is unselected, TransAbacus will ignore repeated phrases (by phrases we mean strings between dots, commas and slashes). This is a great option for those professionals that use computer-assisted translation (CAT) tools, like Trados.

All these options can be switched on/off from the TransAbacus main window.

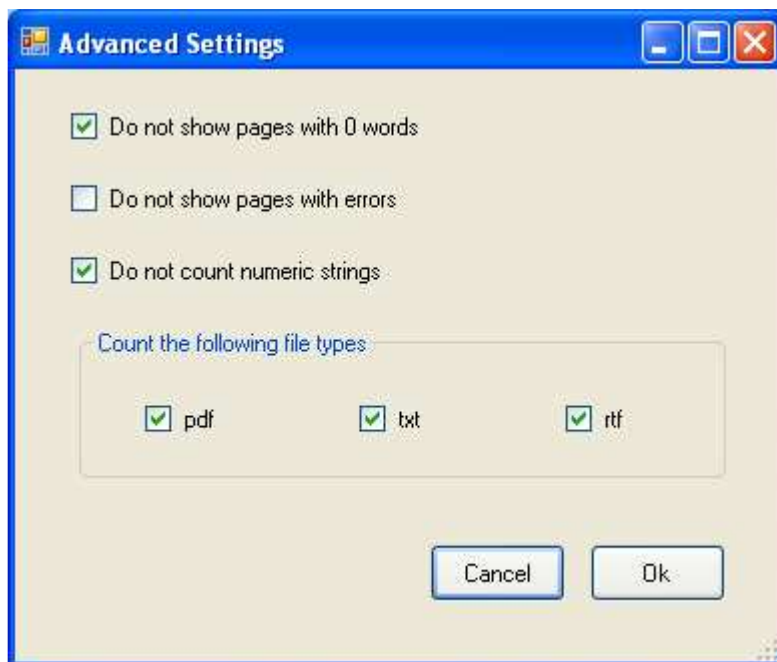

By default, the Title, Description, Keywords, Alt Text, Body and Files options are selected, and the Raw Count option is unselected (this means that it will not count repeated sentences).

5 Advanced settings

By pressing the  button, or by selecting Tools -> Options from the menu, you will see the advanced settings window.

The available options are

- **Do not show pages with 0 words:** If this option is checked, TransAbacus will not show on the main screen the pages whose counting result is 0 (this doesn't mean that such page has no words. Surely, a page with 0 word means that the Raw Count option was not selected, and the sentences on the page matched with sentences previously counted in another page).
- **Do not show pages with errors:** TransAbacus will not display pages that were not counted because of errors retrieving them if this option is selected. Common causes are:
 - The specified page does not exist on the server (this is called “broken link”)
 - The downloaded file is not a valid html page

Pages with errors are marked with a  icon on the first column on the main window.

- **Do not count numeric strings:** If this option is checked, TransAbacus will not count numeric strings.

- **Count the following file types:** By default, all file types are counted. This option allows you to filter file types that are being counted. File type icons appear in the first column of the main window. The icons for the file types are:
 -  pdf file
 -  txt and rtf file

6 Exporting results

6.1 Saving results to a file

TransAbacus allows you to save the results of your word counts in two formats. The supported formats are .csv and .txt. Files formatted as .csv may be opened with MS Excel. Files formatted as .txt may be opened with MS Word, or with Window's Notepad.

To export the results, press the  button, or select File -> Save as option on the main menu. A standard dialog box will appear, where you can select the path to store the results, the file name and the file type.

6.2 Copy your results to another application

You can also select the results you want to export with the mouse and copy them using Ctrl-C (or Edit -> Copy on the main menu), and then paste the results in another application.
